EXP-2 Memory Recall Task

HARSHINI U -240701185

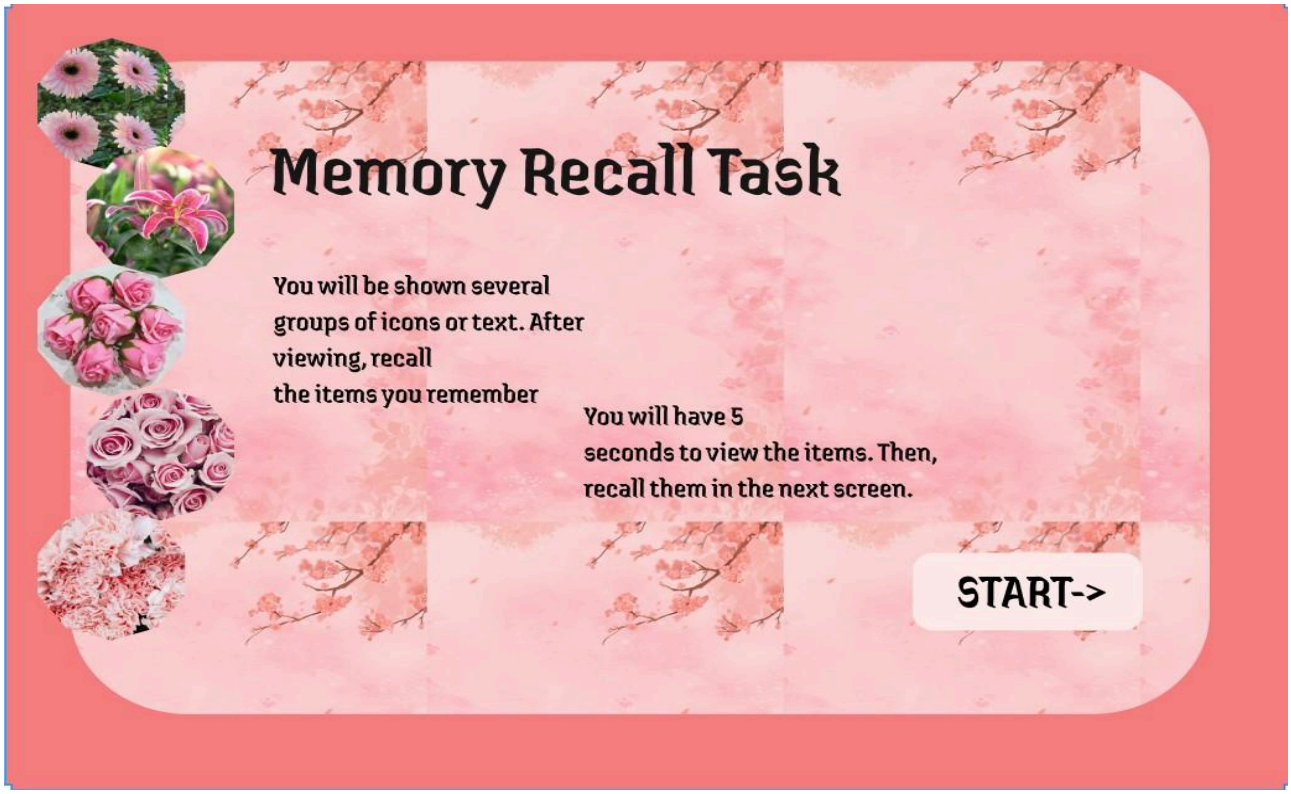
FRAME 1: INSTRUCTION SCREEN

Description and Analysis

This screen serves as the **instruction page** for the Memory Recall Task. It introduces the user to the objective and rules of the task in a simple and visually engaging manner.

- The title **"Memory Recall Task"** is prominently displayed, clearly communicating the purpose of the activity.
- Users are informed that they will be shown **groups of icons or text**, which they must observe and remember.
- A clear **time constraint of 5 seconds** is mentioned, setting expectations and encouraging focused attention.
- The instructions are concise and written in simple language to minimize confusion.
- The **START button** is clearly highlighted, guiding users to begin the task.
- The soft pink background and floral visuals make the interface visually appealing without distracting from the instructions.

UX Benefit:
This screen reduces cognitive load by presenting only essential information and prepares users mentally for the upcoming memory task.



FRAME 2: CHUNKING / OBSERVATION PHASE

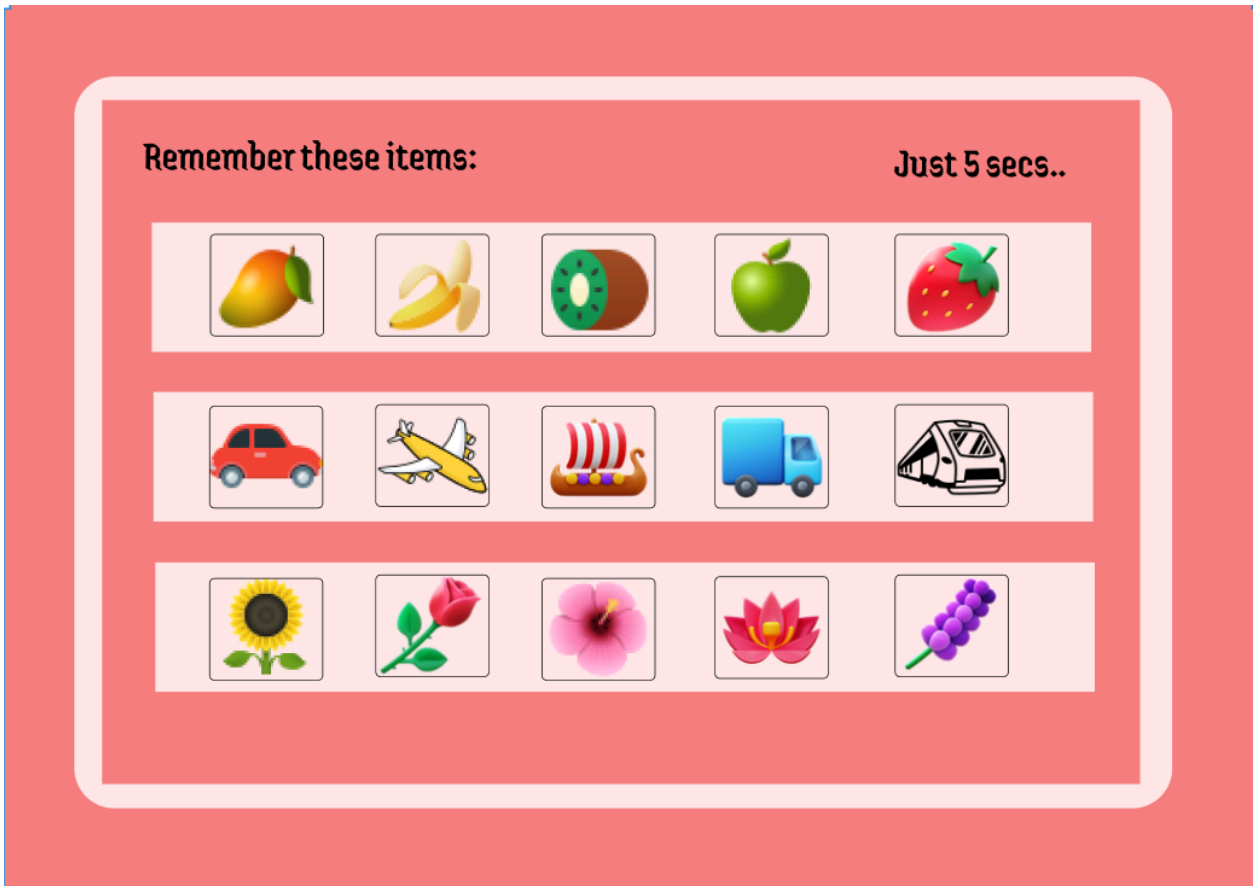
Description and Analysis

This screen represents the **chunking phase**, where users observe and memorize a set of visual items within a limited time.

- The instruction **"Remember these items"** clearly communicates the task.
- A reminder **"Just 5 secs…"** reinforces the time limitation.
- Items are arranged in **three horizontal rows**, each containing related icons such as:
    - Fruits (mango, banana, kiwi, apple, strawberry)
    - Vehicles (car, airplane, ship, truck, train)
    - Flowers (sunflower, rose, hibiscus, lotus, lavender)

- This grouping naturally encourages **chunking**, allowing users to remember items by category instead of individually.

Cognitive Benefit:
By organizing items into meaningful groups, the interface improves short-term memory retention and reduces mental effort.



FRAME 3: RECALL PHASE

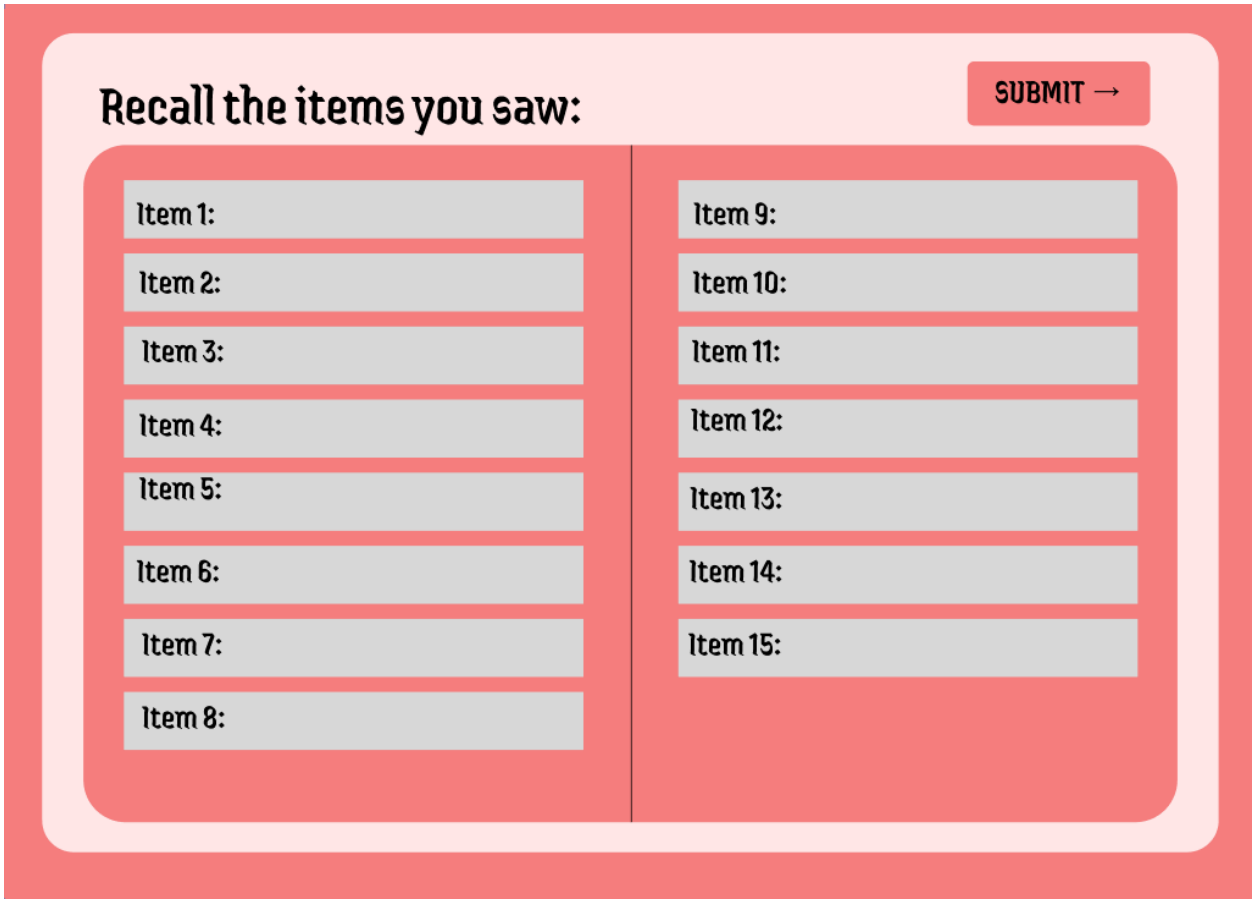
Description and Analysis

This screen is the **recall phase**, where users retrieve information from memory and input the items they remember.

- The heading **"Recall the items you saw"** clearly indicates the task.
- Fifteen input fields are provided, labeled **Item 1 to Item 15**, matching the total number of items shown earlier.

- The split two-column layout improves readability and reduces visual clutter.
- Users must rely purely on memory, as no hints or images are shown.
- The **SUBMIT button** allows users to confirm their responses.

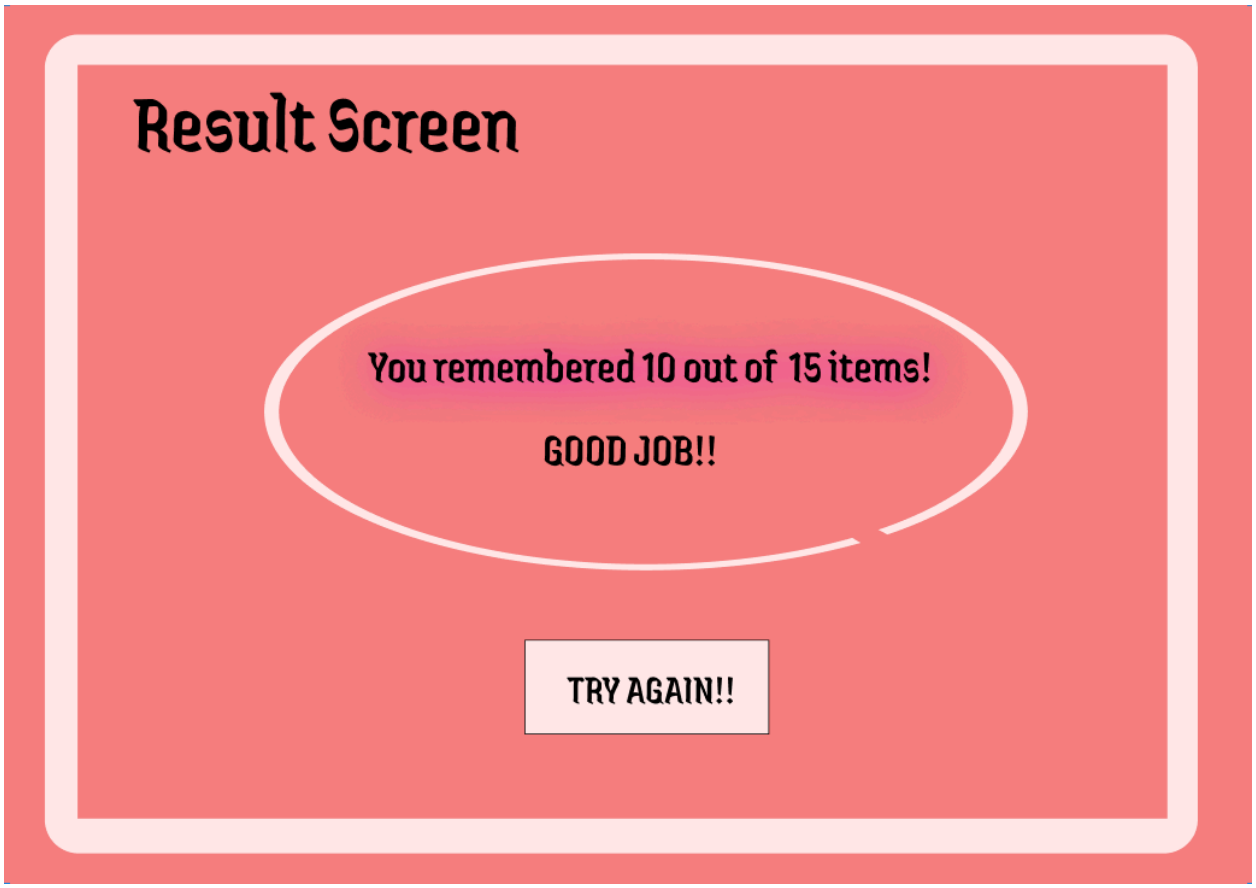
Cognitive Benefit:
This phase evaluates the effectiveness of chunking by testing how accurately users can recall grouped visual information.



FRAME 4: RESULT SCREEN

Description and Analysis

This screen displays the **performance feedback** after the recall task is completed.

- The heading **"Result Screen"** clearly marks the evaluation stage.


- Feedback such as **“You remembered 10 out of 15 items!”** provides immediate and measurable results.
- Positive reinforcement through **“GOOD JOB!!”** motivates the user.
- The **TRY AGAIN** button encourages repetition, supporting learning through practice.
- The simple layout ensures that the user’s attention remains on their performance outcome.
